Sustainable manufacturing and renewable energy to lead path

Climate neutrality target for GHG emissions scope 1 and 2

GHG emissions in million metric tons, scope 1 and 2

EMISSION REDUCTION MEASURES

- Three main levers make a vital contribution to reduce GHG emissions:
 - More sustainable manufacturing (scope 1 and 2)
 - Renewable electricity (scope 2)
 - Renewable steam (scope 2)
- Net external effects comprise known future changes in the energy mix of public grids (e.g. nuclear exit in Germany and Belgium) and in public energy allocation schemes (e.g. EEG in Germany)
- Roadmap for 2030 interim target based on identified 'lighthouse projects'
- Further roadmap until 2035 climate neutrality target in preparation based on similar key measures; no negative impact from business growth as future growth investment are required to support climate neutral growth latest by 2030

Numerous measures effectively reduce GHG emissions

Climate neutrality target for GHG emissions scope 1 and 2

MORE SUSTAINABLE MANUFACTURING

Reducing nitrous oxide emissions by installation of highly efficient catalysts

Optimizing production processes to increase energy efficiency

Employing digital technologies for efficient production control

RENEWABLE ELECTRICITY

EMLA⁽¹⁾: Solar&wind electricity PPA's with ENGIE for 60% of site's power in Antwerp, with Ørsted for 10% of sites' electricity in Germany and with BP for 30% of Spanish operations

NA: Virtual PPA with Ørsted for solar electricity starting late 2024 for 12% of Baytown's electricity

APAC: Solar&wind electricity, PPAs for ~45% of Shanghai site electricity with Datang Power & CGN New Energy

RENEWABLE STEAM

Converting steam generation from fossil to renewable energy sources

Develop options to electrify steam generation based on renewable energies

Develop options to use e.g. biogas or green hydrogen as energy source to generate steam

Continuously improving global renewable electricity footprint

Additional PPAs became active end 2024

MILESTONES TO RENEWABLE ELECTRICITY SUPPLY

EMLA

PPAs with BP, Engie and Ørsted for 650 GWh solar and wind energy:

- 45% of electricity for Antwerp site since 2022 increasing to 60% as of 2026⁽¹⁾
- 10% of German sites as of 2026⁽²⁾
- 30% of Spanish sites as of end 2024

APAC

PPAs with CGN and Datang for 400 GWh solar and wind energy:

- 45% of electricity for Shanghai site since 2023

NA

Virtual PPA with Ørsted for 200 GWh solar power:

- 12% of electricity for US sites as of end 2024

Starting global coverage of renewable PPA's

ELECTRICITY TRANSFORMATION PROGRESS

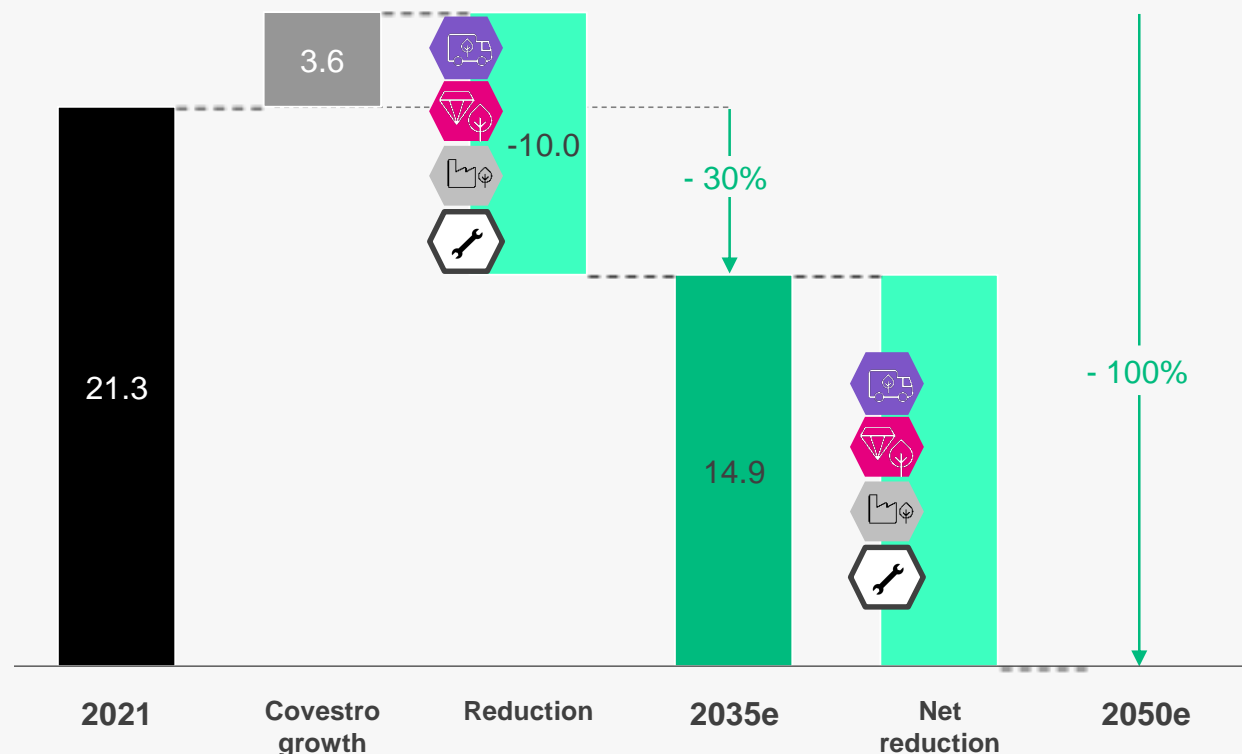

Well on track to our intermediate target of 60% GHG reduction until 2030

Target reduction of 10m tons GHG until 2035 and net-zero until 2050

Climate neutrality target for GHG emissions scope 3

GHG emissions in million metric tons, scope 3 - categories 1, 3, 4, 12⁽¹⁾

EMISSION REDUCTION MEASURES

- Four main levers make a vital contribution to reduce scope 3 GHG emissions:
 - Supplier scope 1&2 reduction
 - Advancing MAKE projects
 - Profitable sales of products based on alternative raw materials
 - Other measures
- Contribution of different levers can vary depending on technical realization of MAKE projects
- Scope 3 emissions represent ~80% of Covestro's 2023 greenhouse gas emissions
- Strict commitment to net-zero underlines consistent implementation of the green transformation
- Net-zero 2050 target in line with SBTi and 1.5° goal

Strategic levers supporting transformation towards climate neutrality

Target for GHG emissions scope 3

FOCUS ON SUPPLIERS

Leading cost positions across markets and regions

Covestro cash cost positions

/// Cash cost improvements based on investment projects

HIGHLIGHTS

- **Covestro MDI** is one of the low-cost producers with cost advantage of ~20% versus the average of 5 least competitive plants. Investment in Tarragona plant significantly improved cost position.
- **Covestro TDI** is one of the low-cost producers with cost advantage of ~30% versus the average of 5 least competitive plants
- **Covestro Polycarbonates** is one of the cost leaders with cost advantage of ~20% versus the average of 5 least competitive plants

US tariffs with unclear consequences

No conclusive evaluation possible given the ongoing movements and several dimensions

Highly volatile and fragile tariff situation

US MARKET SITUATION

- NA market is a net import⁽¹⁾ market for MDI, TDI and PET
- MDI imports of ~500kt per year, TDI and PET to smaller extent
- Tariffs China to US: ~177%⁽²⁾ for MDI/TDI and ~52% for polyols⁽³⁾

ALTERATION OF TRADE FLOWS

- Major capacities for core products in China
- China global production hub for various labor-intensive products
- Tariffs leading to trade flows remaining in APAC and/or coming to Europe causing price & margin erosion

COVESTRO IMPACT

- US with a production of €3.8bn (9 sites, major hub in Texas), US sales €3.1bn
- Production strategy "local for local"
- Covestro imports €0.5bn to the US, mainly from Europe
- Higher import prices leading to higher market prices in the US

INDIRECT GDP RISK

- Major impact on global and regional GDPs
- Covestro core industries automotive, construction and electro with expected dampening
- Furniture already impacted by anti-dumping, risk of further slow down

GDP outlook for 2025 with high uncertainties
